Product Data Sheet Edition 01/01/2014 Identification no: 02 04 02 01 001 0 000011 Sikadur[®]-53 UF (Mortar)

Sikadur[®]-53 UF (Mortar)

Moisture insensitive epoxy resin mortar

Product Description	Sikadur [®] -53 UF (Mortar) is an epoxy based solvent free, three-component moisture insensitive mortar. It has been developed to meet special requirement of concrete repair particularly in damp, wet condition. After mixing, the mortar is placed on moist concrete, when it cures to a rigid, high strength material.			
Uses	Sikadur [®] -53 UF (Mortar) is recommended: For repair of damp and wet concrete			
	For rapid installation and repair			
Characteristics / Advantages	Sikadur [®] -53 UF (Mortar) provides following beneficial properties:			
	High early strength			
	Cures without shrinkage			
	Excellent adhesion to cement substrate even under salt water			
Tests				
Approval / Standards	Testing according to ASTM, C881M-02, Type I, Grade 3, Class B+C.			

Product Data

_					
Form					
Colours	Part A: clear Part B: reddish yellow Part C: sand Part A+B+C mixed: reddish yellow				
Packaging	10.5 kg (A+B+C) Pre-batched unit.				
	Part A: 1.00 kg plastic container Part B: 0.50 kg plastic container Part C: 9.00 kg bag				
Storage	12 months from date of production if stored properly in original unopened, sealed and undamaged packaging, in dry conditions at temperatures between +5°C and +40°C. Protect from direct sunshine.				
Technical Data					
Chemical Base	Epoxy resin.				
Mixed Density	~ 2.1 kg/l at 27°C				
Sag Flow	(According to FIP 5.3 with measurement according to ASTM D2730)				
	On vertical surfaces it is non-sag up to 20 mm thickness				
Layer Thickness	60 mm max.				
	When using multiple units, one after the other. Do not mix the following unit until the previous one has been used in order to avoid a reduction in handling time.				

Thermal Stability	Heat Deflection Temperature (HDT):(According ASTM D-6HDT = +47°C (7 days / +30°C)			ording ASTM D-648	
Mechanical / Physical Properties					
Compressive Strength	(According to ASTM C 881				
	Curing time		Curing temperature(+30°C)		
	3 hours		>10	N/mm²	
	6 hours		>20	>20 N/mm²	
	1 day		>30	N/mm²	
	7	days	>50	>50 N/mm²	
Bond Strength			(Accord	ding to ASTM C 882	
	Time	Temperature	Substrate	Bond strength	
	14 day	+30°C	Concrete dry	> 4 N/mm ² *	
	14 day	+30°C	Concrete moist	> 4 N/mm ² *	
	*100% concrete failure.				
	The consumption of	Sikadur [®] -53 UF (Mo	rtar) is ~ 2.1 kg/m² per	mm of thickness.

Ň

Mixing	Part A : Part B : Part C = 2 : 1 : 18 (by weight)				
Mixing Time	Mix pa spindle (max. consis continu mixing stir aga entrap	Pre-batched units: Mix parts A+B together for at least 3 minutes with a mixing spindle attached to a slow speed electric drill (max. 600 rpm) until the material becomes smooth in consistency and a uniform colour. Then add part C and continue until mixture is homogeneous. Avoid aeration while mixing. The, pour the whole mix into a clean container and stir again for ~ 1 more minute at low speed to keep air entrapment at a minimum. Mix only that quantity which can be used within its potlife.			
Application Method / Tools	When using a thin layer adhesive, apply the mixed adhesive to the prepared surface with a spatula, trowel, notched trowel, (or with hands protected by gloves).				
	When applying as a repair mo	ortar use som	ne formwork.		
	When using for bonding metal profiles onto vertical surfaces ,support and press uniformly using props for at least 12 hours, depending on the thickness applied (not more than 5 mm) and the room temperature.				
	Once hardened check the adhesion by tapping with a hammer.				
Cleaning of Tools	Clean all tools and application equipment with Sika [®] Colma Cleaner immediately after use. Hardened / cured material can only be mechanically removed.				
Potlife	100 g mass		(According to FIP 5.1)		
	+30°C		~20 minutes		
	The potlife begins when the resin and hardener are mixed. It is shorter at high temperatures and longer at low temperatures. The greater the quantity mixed, the shorter the potlife. To obtain longer workability at high temperatures, the mixed adhesive may be divided into portions. Another method is to chill parts A+B and C before mixing them (not below $+5^{\circ}$ C).				
Value Base	All technical data stated in this Product Data Sheet are based on laboratory tests. Actual measured data may vary due to circumstances beyond our control.				
Health and Safety Information	For information and advice on the safe handling, storage and disposal of chemical products, users shall refer to the most recent Material Safety Data Sheet containing physical, ecological, toxicological and other safety-related data.
