Product Data Sheet Edition 21/11/2016 Identification no: 02 08 01 02 007 0 000004 Sikafloor®-161

## Sikafloor<sup>®</sup>-161

2-part epoxy primer, levelling mortar, intermediate layer and mortar screed

Product Description	Sikafloor <sup>®</sup> -161 is an economic, two part, low viscosity epoxy resin. "Total solid epoxy composition according to the test method of Deutsche Baouchemie"		
Uses	For priming concrete substrates, cement screeds and epoxy mortars		
	For normal to strong absorbent substrates		
	Primer for the Sikafloor $^{ extsf{R}}$ -263 SL and Sikafloor $^{ extsf{R}}$ -264 economic flooring systems		
	Binder for levelling mortars and mortar screeds		
	Intermediate layer underneath Sikafloor <sup>®</sup> -263 SL and Sikafloor <sup>®</sup> -264		
Characteristics /	Low viscosity		
Advantages	Good penetration		
	Excellent bond strength		
	Easy application		
	Short waiting times		
	Multi-purpose		

## **Product Data**

Form			
Appearance / Colours	Resin - part A:	brownish-transparent, liquid	
	Hardener - part B:	transparent, liquid	
Packaging	Part A: Part B: Part A+B:	4.0 kg X2 Units 1.063 kg X 2 Units 5.063 kg X 2 Units (ready to mix unit)	
Storage			
Storage Conditions/ Shelf-Life	24 months from date of production if stored properly in original, unopened and undamaged sealed packaging, in dry conditions at temperatures between +5°C and +30°C.		
Technical Data			
Chemical Base	Ероху		

Density	Part A: Part B: Mixed Resin:	~ 1.6 kg/l ~ 1.0 kg/l ~ 1.4 kg/l	(DIN EN ISO 2811-1)	
	All density values at	+23°C		
Solid Content	~ 100% (by volume)	/~ 100% (by weight)		
Mechanical / Physical Properties				
Compressive Strength	Mortar Screed: ~ 45 N/mm <sup>2</sup> (28 days / +23°C/ 50% r.h.)         (EN 1389           *Mortar Screed SR-161 mixed 1:10 with SR-280 filler         (EN 1389)			
Flexural Strength	Mortar Screed: ~ 15 N/mm <sup>2</sup> (28 days / +23°C/ 50% r.h.)		(EN 13892-2)	
Bond Strength	> 1.5 N/mm² (failure in concrete)		(ISO 4624)	
Shore D Hardness	76 (7 days / +23°C)		(DIN 53 505)	
Resistance				
Thermal Resistance				
	Exposure*		Dry heat	
	Permanent		+50°C	
	Short-term max. 7 d		+80°C	
	Short-term max. 12 h	Short-term max. 12 h +100°C		
	Short-term moist/we cleaning etc.).	t heat* up to +80°C where exposure i	s only occasional (steam	

\*No simultaneous chemical and mechanical exposure and only in combination with Sikafloor  $^{\textcircled{B}}$  systems as a broadcast system with approx. 3 - 4 mm thickness

System Information

System Structure	Primer:Low / medium porosity concrete: $1 \times \text{Sikafloor}^{\mathbb{R}}$ -161High porosity concrete: $2 \times \text{Sikafloor}^{\mathbb{R}}$ -161				
	Levelling mortar fine (surface roughness < 1 mm): Primer: $1 \times Sikafloor^{\heartsuit}$ -161				
	Levelling mortar: 1 x Sikafloor <sup>®</sup> -161 + quartz sand (0.1 - 0.3 mm) + Extender T				
	Levelling mortar medium (surface roughness up to 2 mm): Primer: 1 x Sikafloor <sup>ঊ</sup> -161				
	Levelling mortar: 1 x Sikafloor <sup>®</sup> -161 + quartz sand (0.1 - 0.3 mm) + Extender T				
	Intermediate layer (self-smoothing 1.5 to 3 mm): Primer: 1 x Sikafloor <sup>®</sup> -161 Levelling mortar: 1 x Sikafloor <sup>®</sup> -161 + quartz sand (0.1 - 0.3 mm)				
	Epoxy screed (15 - 20 mm layer thickness ) / repair mortar Primer: 1 x Sikafloor <sup>®</sup> -161 Bonding bridge: 1 x Sikafloor <sup>®</sup> -161				
	Screed: 1 x Sikafloor <sup>®</sup> -161 + suitable sand mixture				
	In practice the following sand mixtures proved to be suitable (grain size distribution for layer thicknesses of 15 - 20 mm):	on			
	25 pbw quartz sand 0.1 - 0.5 mm 25 pbw quartz sand 0.4 - 0.7 mm 25 pbw quartz sand 0.7 - 1.2 mm 25 pbw quartz sand 2 - 4 mm				
	Note: The largest grain size should be a maximum 1/3 of the finished layer thickness. Dependent on the grain shape and application temperatures, the aggregates and the most suitable mix should be selected.				

Consumption / Dosage					
	Coating System	Product	Consumption		
	Priming	Sikafloor <sup>®</sup> -161	0.35 - 0.55 kg/m²		
	Levelling mortar fine (surface roughness < 1 mm)	1 pbw Sikafloor <sup>®</sup> -161 + 0.5 pbw quartz sand (0.1 - 0.3 mm) + 0.015 pbw Extender T	1.7 kg/m²/mm		
	Levelling mortar medium (surface roughness up to 2 mm)	1 pbw Sikafloor <sup>®</sup> -161 + 1 pbw quartz sand (0.1 - 0.3 mm) + 0.015 pbw Extender T	1.9 kg/m²/mm		
	Intermediate layer (self- smoothing 1.5 to 3 mm)	1 pbw Sikafloor <sup>®</sup> -161 + 1 pbw quartz sand (0.1 - 0.3 mm)	1.9 kg/m²/mm		
		+ optional broadcast quartz sand 0.4 – 0.7 mm	~ 4.0 kg/m²		
	Bonding bridge	Sikafloor <sup>®</sup> -161	0.3 - 0.5 kg/m²		
	Epoxy screed (15 - 20 mm layer thickness ) / Repair Mortar	1 pbw Sikafloor-161 + 8 pbw quartz sand	2.2 kg/m²/mm		
		eoretical and do not allow for any a rosity, surface profile, variations in			
Substrate Quality	Concrete substrates must be sound and of sufficient compressive strength (minimum 25 N/mm <sup>2</sup> ) with a minimum pull off strength of 1.5 N/mm <sup>2</sup> .				
	The substrate must be clean, dry and free of all contaminants such as dirt, oil, grease, coatings and surface treatments, etc.				
	If in doubt, apply a test are	a first.			
Substrate Preparation Cor		epared mechanically using abrasiv nove cement laitance and achieve			
	Weak concrete must be removed and surface defects such as blowhole voids must be fully exposed.				
	lling of blowholes/voids and surfacted te products from the Sikafloor , Si als.	face levelling must be , Sikadur and			
	The concrete or screed substrate has to be primed or levelled in order to achieve an even surface. High spots must be removed by e.g. grinding. All dust, loose and friable material must be completely removed from all surfaces before application of the product, preferably by brush and/or vacuum.				
Application Conditions / Limitations					
Substrate Temperature	+10°C min. / +30°C max.				
Ambient Temperature	+10°C min. / +30°C max.				
Substrate Moisture	<6% pbw moisture content using Sika $^{\textcircled{R}}$ -Tramex meter (at the time of application).				
Content	Please not that the moisture content must be <4% pbw when using the CM- measurement or Oven-dry-method				
	Test method: Sika $^{ extsf{B}}$ -Tramex meter, CM - measurement or Oven-dry-method.				
	No rising moisture accordir	ng to ASTM (Polyethylene-sheet).			
Relative Air Humidity	80% r.h. max.				
Dew Point	Beware of condensation!				

Application Instructions			
Mixing	Part A : Part B = 79 : 21 (by weight)		
Mixing Time	Prior to mixing, stir part A mechanically. When all of part B has been added to part A, mix continuously for 3 minutes until a uniform mix has been achieved.		
	When parts A and B have been mixed, add the quartz sand and if required the Extender T and mix for a further 2 minutes until a uniform mix has been achieved.		
	To ensure thorough mixing pour materials into another container and mix again to achieve a consistent mix.		
	Over mixing must be avoided to minimise	air entrainment.	
Mixing Tools	<b>king Tools</b> Sikafloor <sup>®</sup> -161 must be thoroughly mixed using a low speed electric s 400 rpm) or other suitable equipment.		
	For the preparation of mortars use a forced action mixer of rotating pan, paddle or trough type. Free fall mixers should not be used.		
Application Method /	Prior to application, confirm substrate mois	sture content, r.h. and dew point.	
Tools	If > 4% pbw moisture content, Sikafloor <sup>®</sup> EpoCem <sup>®</sup> may be applied as a T.M.B. (temporary moisture barrier) system.		
	<i>Primer:</i> Make sure that a continuous, pore free coat covers the substrate. If necessary, apply two priming coats. Apply Sikafloor <sup>®</sup> -161 by brush, roller or squeegee.		
	Levelling mortar Rough surfaces need to be levelled first. Apply the levelling mortar by squeegee/trowel to the required thickness.		
	Intermediate layer Sikafloor <sup>®</sup> -161 is poured, spread evenly by means of a serrated trowel. Roll immediately in two directions with spiked roller to ensure even thickness and if required broadcast with quartz sand, after about 15 minutes (at +20°C) but before 30 minutes (at+20°C), at first lightly and then to excess.		
	<i>Bonding bridge:</i> Apply Sikafloor <sup>®</sup> -161 by brush, roller or squeegee.		
	<i>Epoxy screed / repair mortar:</i> Apply the mortar screed evenly on the still "tacky" bonding bridge, using levelling battens and screed rails as necessary. After a short waiting time compact and smoothen the mortar with a trowel or Teflon coated power float (usually 20 - 90 rpm).		
Cleaning of Tools	Clean all tools and application equipment with Thinner C immediately after use. Hardened and/or cured material can only be removed mechanically.		
Potlife			
	Temperature	Time	
	+10°C	~ 50 minutes	
	+20°C	~ 25 minutes	
	+30°C	~ 15 minutes	

Waiting Time / Overcoating	Before applying products on S	ikafloor <sup>®</sup> -161 allow:	-	
	Substrate temperature	Minimum	Maximum	
	+10°C	24 hours	4 days	
	+20°C	12 hours	2 days	
	+30°C	8 hours	24 hours	
	Before applying solvent containing products on Sikafloor <sup>®</sup> -161 allow:			
	Substrate temperature	Minimum	Maximum	
	+10°C	36 hours	6 days	
	+20°C	24 hours	4 days	
	+30°C	16 hours	2 days	
	Times are approximate and will be affected by changing ambient conditions particularly temperature and relative humidity.			
Notes on Application /	Do not apply Sikafloor <sup>®</sup> -161 on substrates with rising moisture.			
Limitations	Freshly applied Sikafloor <sup>®</sup> -161 should be protected from damp, condensation and water for at least 24 hours.			
	Avoid puddles on the surface with the primer.			
	Sikafloor <sup>®</sup> -161 mortar screed is not suitable for frequent or permanent contact with water unless sealed.			
	Practical trials should be carried out for mortar mixes to assess suitable aggregate grain size distribution.			
	For external applications, apply on a falling temperature. If applied during rising temperatures "pin holing" may occur from rising air.			
	Tools: Recommended supplier of tools: PPW-Polyplan-Werkzeuge GmbH, Phone: +49 40/5597260, www.polyplan.com			
	Construction joints require pre-treatment. Treat as follows:			
	- Static Cracks: prefill and level with Sikadur <sup>®</sup> or Sikafloor <sup>®</sup> epoxy resin			
	<ul> <li>Dynamic cracks: to be assessed and if necessary apply a stripe coat of elastomeric material or design as a movement joint</li> </ul>			
	The incorrect assessment and treatment of cracks may lead to a reduced service life and reflective cracking.			
	Under certain conditions, underfloor heating or high ambient temperatures combined with high point loading, may lead to imprints in the resin.			
	If heating is required do not us produce large quantities of bot affect the finish. For heating use	h CO <sub>2</sub> and H <sub>2</sub> O water var	pour, which may adversely
